‘Setting up demos of Jade deployment options
Shortcuts are provided

Introduction:

Chapter 53 — ‘*Deployment: The many faces of Jade*’ describes the many ways in which Jade can be set up.

The cd-rom provides a Windows shortcut (or rather a folder containg many short-cuts) which will permit you to demonstrate all the options in that chapter with very little work.

Copy that folder onto your desktop. It can be found on the cd-rom at \Demos\Jade deployment options.

Any editing required?

The shortcuts in that folder and its subfolders assume that Jade was installed as C:\Jade6. If this is not the case it will be necessary to edit all the shortcuts to point to the location where Jade was installed.

Running the demonstrations

The demonstrations follow the sequence of the deployments described in the chapter. The folder structure is as set out below. The non-bold lines are the runnable programs.

Jade Deployment Options

- **1_Jade Devmt GUI any schema – folder**
  - 1_Jade devmt GUI any schema
- **2_Jade run 1 appn directly – folder**
  - 2_Jade Run AirwaysApp directly
- **3_Jade network w fat clients – folder**
  - AirwaysAppFatClient
  - jadRap.exe
- **4_Jade Run thin client – folder**
  - 4a_AirwaysApp thin client
  - 4b_DemoCombo App thin client
  - 4c_Jade Devmt App thin client
  - jadApp singleuser.exe
- **5_Jade Run JadRap JadApp thin clients – folder**
  - a_jadRap.exe
  - b_jadApp91.exe
  - b_jadApp92.exe
  - c_AirwaysAppOn91 thin client
  - c_AirwaysAppOn92 thin client
  - d_AirwaysMfgrAppOn92 thin client
  - e_DemoComboOn91 thin client
- **6_Jad e Run B'Ship over Tcplp**
  - jadApp multiUser
  - BattleShipFighter over Tclp

- These are arbitrary choices of programs to run. The focus is on the mode of deployment rather than the particular applications being run.
- You may wish to add or substitute others.
- An application like AirwaysApp needs its database loaded before its menu options can do anything interesting. The same is true of HotelApp and MiniUniv. Look for a File | Database build type of menu entry.
- The data files for these applications can be found in a correspondingly-named sub-folder under \Jadebook\Datafiles.
- Not all menu options have been implemented for these applications which were, in different years the product of in-lecture development over several weeks, in a manner similar to that of TheLibrary.
- Of course, none of these applications can be run unless their schemas have been loaded into the repository with Schema | Load.
