## Loading sample skins from Dm85_SampleSkins.ddb.

---

The file \Demos Dm85_SampleSkins.ddb is supplied by Jade as a sample of skins which may be used in user schemas. If you contruct your own skins they may be loaded similarly.

## A) To load the file into a user schema,

1. In the Schema Browser, select the Schema | Load menu option.
2. In the Forms File Name text box, select the \Demo\Dm85_SampleSkins.ddb file. There is no corresponding .scm file
3. Select the Advanced button.
4. In the Advanced Options dialog, select any user schema as the Target Schema.
5. Start the load, using the two OK buttons.

After loading the skins, they will be available for use in all user schemas in that repository.

## B) Within a schema, to access the skins:

1. On some form within the schema create a new button labelled, say, "Select a skin" .
2. Give that button the following code:

```
vars form : JadeSkinSelection;
begin
    create form;
    form.showModal;
end;
```

3. Proceed to select a skin.
